

Donate with Cryptocurrencies

We run solely off donations. 90% of our capabilities have enabled our operations via crowd funding, below you can find multiple cryptocurrency addresses to donate towards our project.

Bitcoin	1LZGRgYjVut2faK3sDR5vNQENc6V4fxBNq
Bitcoin Cash	1FwPnsnMsf9evcMdfKHQMb1VRXkTXYkprq

Dashcoin	XdhYG6c8EZWPc9qKXcunjgntn55UPtgn9t
Litecoin	LRtS393MTqtDoP7G2CBusmibw7pCRdizTm

We promise to update you on any developments with our project. Donations go toward:

- Salt samples for emerging chemicals (to compare samples that are submitted to us). The process for this is long, and we are needed to reach out to our partners with the appropriate licenses to acquire such chemicals, this means we cannot add entries as it is handled by our partners, with inclusive fees. Our current database only supports traditional substances. This particular is for research chemicals.
- Management and purchase of additional and current gas chromatography/mass spectrometry and liquid chromatography/mass spectrometry devices (maintenance, operation, cleaning etc.)
- Lab maintenance and sterilization.
- Lab equipment (we often have to make disposal of used containers to assure accurate results, for the safety of the submitter and further evaluations).
- Adequate storage facilities, refrigeration units etc.
- Server hosting and development for our website (advancing current automation).

This is just what is needed for us to operate, we're volunteers and don't take payment for ourselves. Once we have reached the set initial minimum of the fundraiser we will have a monthly goal to reach to continue maintaining our equipment which is significantly less than what is currently set. *This page will be updated in the future.*
